

Codimar produces a specific roller to manufacture FFP2 masks

Codimar, manufacturer of **Rollers & Conveyors**, with more than 25 years of experience in the sector, has started to manufacture a new product, **a special roller for cutting FFP2 masks**, a design also suitable for any application in cutting and handling cellulose.

This new project begins after the high demand for this type of roller derived from the number of machines **manufacturing FFP2 masks** in Europe, and the need for machinery manufacturer customers who design and manufacture this type of machinery in Spain. **Codimar** adapts to current market needs, offering the possibility of manufacturing this type of roller in different lengths and diameters for any industrial sector.

Technical Specifications

Turned roller.
Made of F-521 steel.
Heat treated in a high vacuum oven.
Hardness 58/62 HRC
Total tempering to the core.
Rear special grinding.
Tolerance ± 0.01

All our Design & Manufacturing process of **Rollers & Conveyors**, and our management processes, are certified by ISO 9001, and all new projects have previously passed through the **Codimar Testing Area**, in which their reliability and effectiveness are verified. ... before presentation to the customer.

With a strong **national and international presence**, **CODIMAR**, from its factory in Puente Genil, Córdoba (Spain) proposes different **Intralogistics Solutions** to companies around the world, as well as the manufacture of any type of **Mining or Maintenance Roller**.
